

INCA SEAL

MASONRY BRICK AND BLOCK WATERPROOF SEALANT

Inca Seal for Masonry Bricks and blocks inhibits the migration of water and moisture and prevents carbon build-up, lime staining and fungal growth — maintaining the general aesthetics of all masonry products.

Inca Seal acts as a water repellent for brick, block and concrete substrates. The aesthetics of the surface treated is not altered by the 10 mm impregnation of our silane product. The base is quartz, ensuring long term durability and high waterproofing performance.

INCA SEAL MASONRY BRICK AND BLOCK WATERPROOF SEALANT

SABS tested and carries a manufacturers warranty.

ADVANTAGES: **INCA SEAL** inhibits the migration of moisture and in so doing prevents carbon build-up, lime staining and fungal growth, thus maintaining the general aesthetics of masonry products.

APPLICATION: Implant treatments by either dipping or spraying. For "In situ" application a low pressure spray is recommended for saturation and to prevent run off. Surfaces should be clean, sound and dry. Wipe down glass and window frames immediately after application.

COVERAGE: Coverage of 4 m² to 6 m² per litre. A two coat application applied wet on wet is required.

APPROVAL : **INCA SEAL** has been tested by rain penetration test - **SABS** 0400 (KK 17.1). Independent tests by Draper Penhall & Associates, concluded that **INCA SEAL** products provide an excellent barrier against water absorption.

Stops damp, carbon build up, lime staining and fungal growth

Do it right the first time—Inca Seal it
